**IQRA RANI        4719-FOC/BSSE/F23**  
**MARYAM AMIR    4704-FOC/BSSE/F23**

**SUBMITTED TO:**  
**MAM RAHEELA BIBI**

**COURSE:**  
**BUSSINESS PROCESS ENGINEERING**

## **Enhancing the SkillBlaze Process Model with Data Objects**

### **Objective**

The goal is to improve the SkillBlaze process model by incorporating data objects that represent the flow of information and materials between different activities. This ensures a clearer understanding of how data moves within the platform, enhancing both usability and efficiency.

### **Integration of Data Objects**

#### **User Registration & Profile Setup**

When a new user registers, they fill out a registration form that collects their details.

After login, users create their profiles, selecting skills, which are stored in the User Profile Database.

A personalized skill roadmap is generated based on their selected skills and stored in Skill Data Records.

#### **Course Enrollment & Learning**

Users enroll in courses, accessing course materials and payment records if needed.

Learning progress is tracked through achievement records and stored in Certification Data.

#### **Skill Assessment & Certification**

Users take skill assessments, and results are stored in the Assessment Record.

Successful completion results in a certificate, which is issued and stored.

#### **Marketplace & Collaboration**

Users explore the Marketplace, where they can trade skills and exchange knowledge.

Collaboration Data is recorded when users interact with mentors or join discussion hubs.

#### **Job Opportunities & Career Progression**

Upon completing a skill roadmap, users receive job listings and can apply directly.

The system generates assessment reports to help users showcase their skills to potential employers.

#### **Exit & Continuous Learning**

Users can either exit or continue their learning journey, maintaining access to certifications and their skill roadmap.

### **Conclusion**

By integrating these data objects, the process model becomes more structured, making it easier to track the user's progress and interactions. This refined approach enhances clarity while keeping the model simple and efficient.

# BPMN MODEL FOR SKILLBLAZE
